

Genetic Blueprint

Inspired by the heroes of their youth, Genetic Blueprint delivers handwritten dynamic rock music.

Started in 2011, Genetic Blueprint had their first appearance on stage in 2012.

Numerous gigs, studio sessions and hours and hours in the rehearsal room followed. Over time, the band partly re-formed itself, new songs were added and so they developed into a full-grown live band.

The band members have very different musical roots but also a large common intersection. They all grew up around the turn of the year 2000 with bands like "Die Ärzte", "Blink 182", "Limp Biskit", "Foo Fighters", "Good Charlotte" and the "Spice Girls". From there, one of them got a bit more into metal, the others more into blues, pop, hip-hop or alternative. This is exactly what makes the unique sound of GB, as every one of them is involved in the songwriting process and the live arrangement of the songs. GB is not just a band. It is friendship, it is family and you can taste that.

Members of Genetic Blueprint:

Daniel Brandenburger – Guitar

Biniam Tessema – Vocals

Chris Eversberg – Guitar

Tobias Landvogt – Bass

Daniel Schenker – Drums
